

Retail Shopping (strip) Center Location

Typical Layout for an office located in a retail shopping center. With the front being glass—it is important to keep your conference rooms up front with windows (keeps people more comfortable) - also retail (strip center) locations will require you to have your own bathrooms, as well as limit your walls space and design considerations—you will usually be able to fit fewer private offices—but more private desks. Again this design based on 2400 sq.ft and can hold approximately 120 agents (5 pvt offices, 12 pvt desks, with e rest in the shared work areas. With the center of the space being open—it is also much easier to supervise staff and to hold meetings, etc.
